AFTER PROCRASTINATION NATION

UNCERTAINTY LAB.

THREE HOURS. YOUR TEAM. THEIR OWN NUMBERS.

Forwarded this? Someone thinks your team should have one. Here is what it is, on one page.

AN UNCERTAINTY PROBLEM, NOT A SKILLS PROBLEM

62% of professionals in our research had put off an AI tool they believed would help them, and roughly three quarters said their organisation encouraged them to experiment. Permission alone doesn't explain it. Uncertainty does. Who sees AI as an opportunity:

24%
with low tolerance for uncertainty

69%
with high tolerance for uncertainty

Tolerance for uncertainty isn't built with information. It's built by feeling your own response, with other people, and moving through it.

WHAT YOUR TEAM LEAVES WITH

- A shared language for what uncertainty does to decisions, short enough to use in Monday's meeting.
- Three tools, one for each state: Fear becomes action, Fog becomes agility, Stasis becomes connection.
- Their own results, individually and as a team. Every reflection is private; nothing goes to their employer.
- A debrief with your senior team that turns a good session into a decision about what's next.

25%
MORE TOLERANCE FOR UNCERTAINTY, ON AVERAGE

20%
LESS NEED FOR CLOSURE, ON AVERAGE

100%
WOULD RECOMMEND IT

ONE OF THE BIGGEST MOVES
TOLERANCE FOR AMBIGUITY

HOW IT WORKS

BEFORE

A briefing call about what's stalling, and a five-minute anonymous survey, so the session opens on your team's own picture.

ON THE DAY

Three hours, in person, up to 50. Storytelling, behavioural science and live experiments, with validated scales before and after, shown live.

AFTER

Everyone gets their own results. A few weeks later, a debrief with your senior team on where confidence is high and where it's fragile.

WHAT CLIENTS SAY

> "Absolutely outstanding, one of the most thoughtful and impactful workshops we've ever had."
>
> Dr Vivian Mohr, President, Bauer Media Audio

> "An extraordinary feat of scientific storytelling and insight."
>
> Rich Waterworth, General Manager EMEA, TikTok

TWO WAYS IN

UNCERTAINTY LAB

Three hours, in person, measured, with a debrief.

THIS HOUR, FOR YOUR TEAM

Not ready for three hours? We'll bring this session to your team, with their own live numbers.

Investment. Priced per team, not per head, with a straight figure before you commit. **Making the case internally?** Hold a date and we'll give you what you need.

HOLD A DATE.

HUB.MEDIAZOO.TV/UNCERTAINTY-LAB

We lead every Lab ourselves. Book by 30 November for a date in January. We come back within two working days with dates, a straight figure and what happens next.

Led by Sam Conniff and Katherine Templar Lewis.
Sam: Chief Uncertainty Officer, Mediazoo.
Katherine: neuroscientist, Chief Science Officer.
Developed with UCL. Research published with the CIPD.
Uncertainty Experts is part of Mediazoo Group.
